

New & Refurbished Parts

Slow and Steady Wins the Race

While integral engine-compressors are very reliable, they'll need some love every now and then.

We believe in working hard, being an advocate for clients and listening carefully.

We often hear a need for a solution that gives us the opportunity to innovate.

This happens often while working with these older machines and has led to new developments in advanced fuel and emission systems.

Equipment we work on:

- Cooper Bessemer
- Clark
- Ingersoll Rand
- Enterprise
- Worthington
- Superior
- Waukesha
- Nordberg

Finding parts for these machines can be challenging. As such, we do not list or publish a pricelist or inventory because they are constantly changing. However, with decades of experience, our team has the resources and connections to find the new or refurbished parts you need.

The new and refurbished parts and assemblies we offer are designed to meet or exceed OEM specifications.

Components

- Power Liners
- Power Cylinders
- Compressor Pistons and Rods
- Valves
- Power Pistons
- Ring Sets
- Gaskets and Seals
- Bearings
- Refurbished Component Alternatives

All components are inspected and will only be installed by our team of field technicians after they meet material and dimensional requirements.

If special machining or manufacturing is required, we maintain an extensive network of quality suppliers that can meet all requirements and expectations under our experienced direction.
